Journal: Golden Research Thoughts. 1 (IX): 4-Jan

Abstract:

Climate change is a major problem caused by the increase of human activities leading to several and on well-being and over all personality, leading to mental disaster in the form of depression, suicide and schizophrenia. The combustion of fossil fuels, increasing number of industries, and large-scale deforestation are some of the causes for the accumulation of GHGs (greenhouse gases) in the atmosphere.

Resource Description

Exposure :

weather or climate related pathway by which climate change affects health

Unspecified Exposure

Geographic Feature:

resource focuses on specific type of geography

None or Unspecified

Geographic Location:

resource focuses on specific location

Global or Unspecified

Health Impact:

specification of health effect or disease related to climate change exposure

Injury, Mental Health/Stress, Other Health Impact

Mental Health Effect/Stress: Mood Disorder, Schizophrenia/Delusional Disorder, Stress Disorder, Other Mental Disorder

Other Health Impact: Well-being;Suicide

Mitigation/Adaptation:

mitigation or adaptation strategy is a focus of resource

Climate Change and Human Health Literature Portal

Adaptation, Mitigation

Population of Concern: A focus of content

Population of Concern: ☒

populations at particular risk or vulnerability to climate change impacts

Low Socioeconomic Status

Resource Type: ☒

format or standard characteristic of resource

Review

Timescale: ☒

time period studied

Time Scale Unspecified

Vulnerability/Impact Assessment: ☒

resource focus on process of identifying, quantifying, and prioritizing vulnerabilities in a system

A focus of content
